BHARAT BIJLEE LV HAZARDOUS AREA MOTORS: An Introduction

In specific scenarios, hazardous environment cannot be avoided and hence machines and processes have to be appropriately designed, to not only mitigate the risks but also avoid untoward incidents.

Motors are also used in applications in hazardous areas, thus creating a need for a very specific design suitable to such conditions. Hazardous areas are defined as those where explosive atmosphere is present, or is expected to be present, in quantities which merit the requirement of special precautions. The

construction, installation and use of equipment is designed specifically to suit the hazardous environment. The decision as to whether an area is hazardous as per the relevant regulations and specifications, rests entirely with the user, or in case of doubt, with the competent and authorized inspecting authority. IS 5572 classifies hazardous areas into three zones, depending on the frequency and duration for which dangerous concentrations are likely to be present.

| Zone | Classification of area as per IS 5572 | Selection of electrical equipment as per IS 16724 |
|----------|---|--|
| Zone '0' | An area in which hazardous atmosphere is continuously present. | Generally, use of electrical equipment is to be avoided. But when this is not practicable, Intrinsically safe or pressurized electrical equipment to be used. |
| Zone '1' | Hazardous atmosphere is likely to be present under normal operating conditions. | For this area, electrical equipment used, must be in flame proof enclosure type Ex 'd' conforming to IS/IEC 60079-1. |
| Zone '2' | In this area, hazardous atmosphere is likely to be present only under abnormal operating conditions and for a short period. | Apparatus with type of protection Ex eb in accordance with IS/IEC 60079-7 may be used without any special enclosure. Apparatus having type of protection Ex ec in accordance with IS/IEC 60079-7 are also permitted for use. |

Why Bharat Bijlee?

Bharat Bijlee offers a wide range of hazardous area motors.

Increased Safety Ex ec and Flame Proof Ex 'd' motors across different efficiency levels

Flame Proof Ex 'd' motors for Zone '1', '21' & '22' & Increased Safety Ex ec motors for Zone '2' & '22'

Flame Proof Ex 'd' motors suited for temperature class T4, T5 & T6 and Increased Safety Ex ec motors for temperature class T3

With major certifications viz. PESO, DGMS

ATEX / IECEx certification for Flame Proof Ex 'd' motors

Licensed by BIS as per statutory requirement

Motors with certified test reports from PESO approved test laboratory

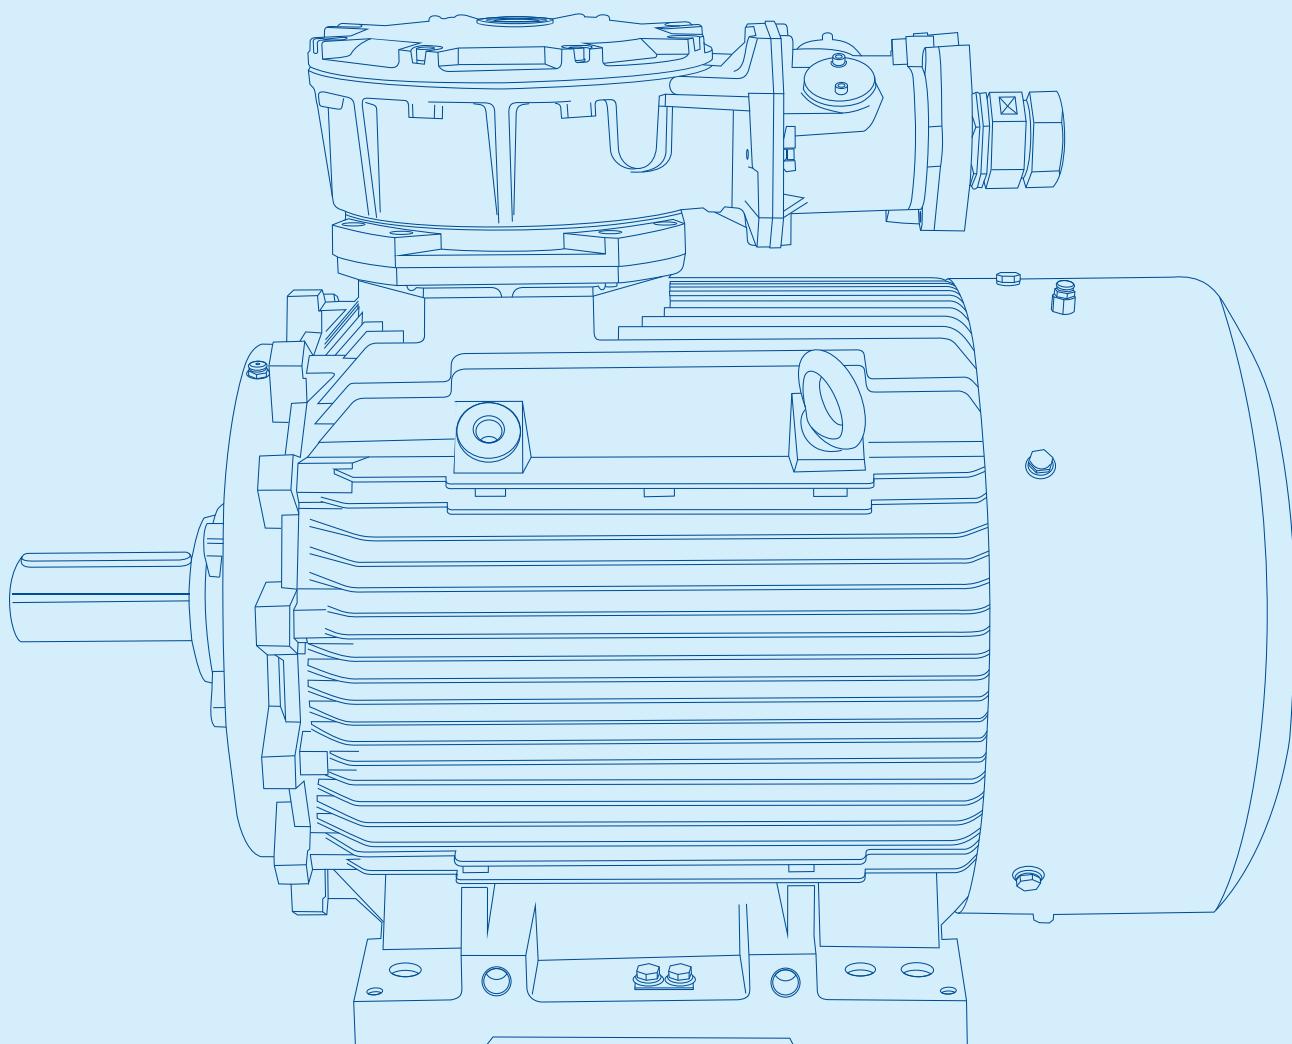

Accessories and customizations as per customers' requirements adhering to necessary statutory requirements

Bharat Bijlee's motors for hazardous area have been widely used across various sectors such as Oil & Gas, Pharmaceutical, Mining, Chemical & Power and have been successfully working on all possible applications over the years. These motors have been trusted for critical applications that require adherence to

extremely stringent norms. Our annual production capacity is backed by an indigenous state-of-the-art manufacturing facility. With rigorous quality checks at various stages in our factory, we deliver some of the finest and most reliable motors in the industry.

FLAME PROOF MOTORS: Type Ex 'd'

FLAME PROOF MOTORS: Type Ex 'd'

A. Technical Information

A.1 Industrial Applications

| | | | | | | | | | |
|---|---|---|---|---|---|--|---|---|---|
|  |  |  |  |  |  |  |  |  |  |
| Coal Mines | Petro Chemicals & Chemicals | Oil Mines & Rigs | Fertilizers | Solvent Extraction Plant | Paints & Varnish Industry | LPG Bottling Plants | Agro Chemicals | Drugs & Pharmaceuticals | General Industry |

A.2 Reference Standards

| | |
|---------------------------|--|
| IS/IEC 60079-0 | Electrical apparatus for explosive gas atmosphere-Part 0 General Requirements |
| IS/IEC 60079-1 | Electrical apparatus for explosive gas atmosphere-equipment protection by Flame Proof Enclosures "d" |
| IS 5572 | Classification of hazardous areas (other than mining) having flammable gases and vapors for electrical installations |
| IS 16724 | Explosive atmospheres - Electrical Installations Design, Selection and Erection |
| IS 15999 : Part 1 | Rotating Electrical Machines - Part 1 : Rating and Performance |
| IS 12615 | Line Operated Three Phase A.C. Motors (IE CODE) "Efficiency Classes and Performance Specification" |
| IS 4029 | Guide for testing Three Phase Induction Motors (For Standard TEFC SCR Motors) |
| IS 4889 | Methods of determination of efficiency of Rotating Electric Machines (For Standard TEFC SCR Motors) |
| IS 15999 - (Part 2/Sec 1) | Standard methods for determining losses and efficiency from tests (For IE Series Motors) |
| IS/IEC 60034-5 | Degree of protection provided by the integral design of Rotating Electrical Machines (IP code Classification) |
| IS 6362/IEC 60034-6 | Designation of method of cooling for Rotating Electrical Machines/method of cooling (IC code) |
| IS 12065 | Permissible limits of noise level for Rotating Electrical Machines |
| IS 12075 | Mechanical Vibration of Rotating Electrical Machines |
| IS 8223 | Dimension and Output rating of Rotating Electrical Machines |
| IS 900 | Code of practice for installation and maintenance of Induction Motors |
| IS 1231 | Dimensions of Foot Mounted AC Induction Motors |
| IS 2223 | Dimensions of Flange Mounted AC Induction Motors |

A.3 Statutory Approvals and Licenses

Motors used in hazardous areas need statutory approvals from various statutory authorities depending upon their area of jurisdiction before marketing. Statutory / Licensing authorities accord their approval / license based on the test reports issued by their recognized test houses such as CIMFR Dhanbad, ERTL (East) Kolkata etc.

| Statutory Authority | Scope | Area of Jurisdiction |
|---|---------------------------|--|
| PESO Approved Test Laboratory | Testing and Certification | |
| Directorate General of Mines Safety (DGMS), Dhanbad | Approving | Coal Mines |
| Petroleum & Explosives Safety Organization (PESO), Nagpur (formerly CCoE) | Approving | All areas where explosive liquids/gases are stored and transported |
| Bureau of Indian Standards (BIS) | Licensing | |

All Flame Proof Motors have license mark IS/IEC 60079-1. DGMS identification mark is mandatory for motors used in coal mines.

FLAME PROOF MOTORS: Type Ex 'd'

Technical Information

A.4 Temperature Class

The classification of temperature class T1 to T6 is as mentioned below:

| Temperature Class as required by the area classification | Maximum Surface Temperature in °C | Allowable Temperature Classes of equipment |
|--|-----------------------------------|--|
| T1 | ≤ 450 | T1 to T6 |
| T2 | ≤ 300 | T2 to T6 |
| T3 | ≤ 200 | T3 to T6 |
| T4 | ≤ 135 | T4 to T6 |
| T5 | ≤ 100 | T5 to T6 |
| T6 | ≤ 85 | T6 |

The maximum surface temperature under the worst operating condition must not exceed the ignition temperature of gas. The maximum surface temperature refers to that surface which comes in contact with the explosive gas. In case of Flame Proof Ex 'd' motors, this refers to external surface temperature, whereas in case of Increased Safety Ex ec motors, this refers to the internal temperature as well.

Temperature Class of Bharat Bijlee Motors

| Frame Size | | Temperature Class |
|----------------|----------------------------------|-------------------|
| IEC Frame Size | Pole | |
| 80 | 2, 4, 6, 8 | T6 |
| 90L | 2, 4, 6, 8 | T5 |
| 90L | 2(2.2kW) 4(1.5kW) 6(1.1kW) | T6 |
| 100L | 2, 4, 6, 8 | T5 |
| 112L | 2, 4, 6, 8 | T5 |
| 132 S/M | 2, 4, 6, 8 | T5 |
| 160M/L | 2, 4, 6, 8 | T5 |
| 180M/L | 2, 4, 6, 8 | T5 |
| 200L | 2, 4, 6, 8 | T5 |
| 225S/M | 2, 4 6, 8 | T4 T5 |
| 250M | 2, 4 6, 8 | T5 T4 |
| 280S/M | 2, 4, 6, 8 | T4 |
| 315S/M/L | 2, 4, 6, 8 | T4 |

Classification of Hazardous Gases

Bharat Bijlee Flame Proof motors are offered suitable for gas group I, IIA and IIB only. List of hazardous gases, their group specification and ignition temperatures have been specified in IS/IEC 60079-20. Some of the gases are listed in the following table.

| Gas Group | Gas or Vapour | Temperature Class |
|-----------|---------------------|-------------------|
| IIA | Methane (firedamp) | T1 |
| | Industrial Methane* | T1 |
| | Carbon monoxide | T1 |
| | Decane | T3 |
| | Xylene | T1 |
| | Methyl acetate | T1 |
| | Hexane | T3 |
| | Heptane | T3 |
| | Iso-octane | T2 |
| | Propane | T1 |
| | Butane | T2 |
| | Benzene | T1 |
| | Cyclohexane | T2 |
| | Acetone | T1 |
| | Ethyl acetate | T1 |
| IIB | Chloroethylene | T1 |
| | Methanol | T1 |
| | Ethanol | T2 |
| | Butyl acetate | T2 |
| | 1,3-Butadiene | T2 |
| IIC | Ethylene | T2 |
| | Diethyl ether | T4 |
| | Ethylene oxide | T2 |
| | Coke-oven Gas | T1 |
| | Hydrogen | T1 |
| | Acetylene | T1 |

*Note: Industrial Methane includes Methane mixed with not more than 10% volume of Hydrogen.

FLAME PROOF MOTORS: Type Ex 'd'

Technical Information

A.5 Electrical Features

Standard Operating Conditions

- Voltage: $415V \pm 10\%$
- Frequency: $50\text{ Hz} \pm 5\%$
- Combined Variation: $\pm 10\%$ (absolute sum with maximum frequency variation 5%)
- Ambient: 45°C
- Altitude: upto 1000m above mean sea level

Re-Rating factors applicable under different conditions of Ambient and Altitude

I. Variation in Ambient

| Ambient Temperature ($^\circ\text{C}$) | Permissible Output as % of Rated Value |
|--|--|
| 30 to 45 | 100 |
| 50 | 96 |
| 55 | 92 |
| 60 | 87 |

II. Variation in Altitude

| Altitude above Mean Sea Level (m) | Permissible Output as % of Rated Value |
|-----------------------------------|--|
| 1000 | 100 |
| 1500 | 97 |
| 2000 | 94 |
| 2500 | 90 |
| 3000 | 86 |
| 3500 | 82 |
| 4000 | 77 |

Method of Starting

| kW Rating | Method of Starting | No. of Leads |
|-------------------------|---------------------|------------------------------|
| Upto & including 1.5 kW | DOL | 3 (Internal Star Connection) |
| Above 1.5 kW | DOL or Star / Delta | 6 |

Starting Current Measurement of Bharat Bijlee Motors

Induction motor starting current is generally 6 to 7 times the full load current of the motor. This is a characteristic feature of the motor and though undesirable, it is inevitable in the design of the motor.

Measurement of this starting current at rated voltage becomes difficult since it demands higher capacity of the supply system as well as use of appropriate CTs in the circuit of meters. Generally a fraction of rated starting current is passed in the motor due to capacity constraints. This current is extrapolated to rated voltage.

| kW Range | Measurement at % of Voltage to Rated Voltage |
|------------------|--|
| 0.12 kW to 90 kW | 70 % |
| 90 kW to 200 kW | 60 % |

Duty, Starting Time and Number of Consecutive Starts

For load $GD^2 \leq$ Motor GD^2 , the motors can safely withstand 3 consecutive starts from cold condition and 2 consecutive starts from hot condition. In application where more severe starting conditions are encountered, a special enquiry should be made to our Sales Office. e.g.

- Drives with high inertia e.g flywheel drives, eccentric presses, large fans, etc.
- Drives involving intermittent duty of motors with frequent starts e.g. rolling mills, centrifuges and conveyor motors, etc.

The enquiry should be accompanied with following information:

- GD^2 and relevant speed of driven equipment
- Duty cycle / sequence of operation / no. starts / hour
- Speed-Torque diagram of driven equipment
- Method of braking (Electrical or Mechanical)
- Method of starting
- Method of coupling

FLAME PROOF MOTORS: Type Ex 'd'

Technical Information

Insulation for Converter Fed Motors

- Converted fed motors are provided with special insulation scheme to take care of voltage surges in the supply voltage.
- Depending on the voltage wave rise time (dV/dt) and the maximum peak to peak voltage at the motor terminals, suitable insulation schemes are provided on request.
- On customer's demand, insulated bearings are offered from frame size 160 onwards on the non driving end side of the motor.

Earthing Terminals

Two earthing terminals are provided, one on each motor foot. Also, two earthing terminals are provided in the terminal box.

A.6 Mechanical Features

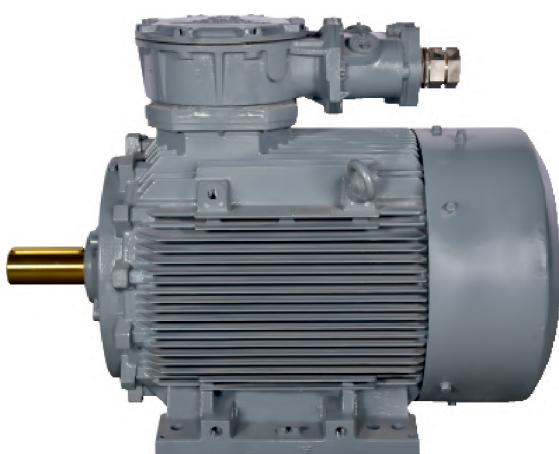

Enclosure and Cooling

These motors are so designed that the frame temperature will remain below the ignition temperature of gas-air mixture involved. The frame, end shields, terminals boxes and bearing covers of all motors are made of grey cast iron. All cast iron parts forming flame proof enclosures are subjected to hydraulic pressure test, after final machining as per IS/IEC 60079-1.

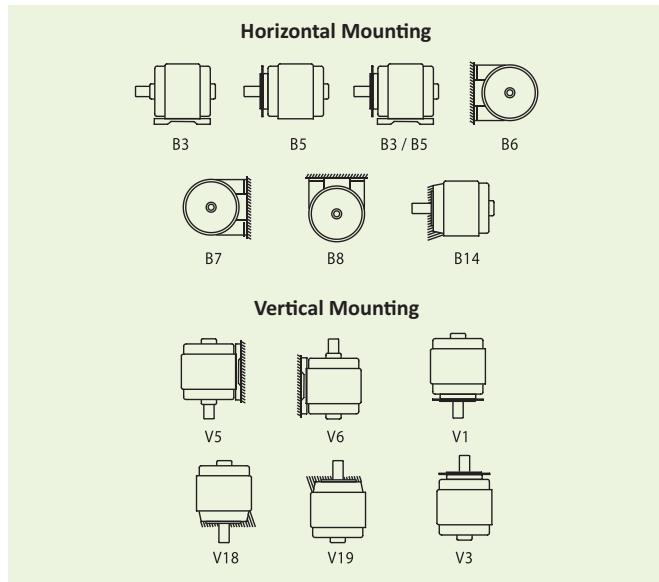

All motors are Totally Enclosed Fan Cooled (TEFC). The cooling is affected by self-driven, bi-directional cast iron or fabricated centrifugal fan protected by fan cover. The type of cooling is IC 411 as per IS 6362/IEC 60034-6. Minimum cooling distance as indicated in GA drawing has to be provided for effective cooling of the motor.

Degree of Protection

All motors have IP55 Degree of protection as per IS/IEC 60034-5. Higher degree of protection can be provided on request. All flanged motors are additionally provided with oil tight shaft protection on driving end side. A drain plug is not permissible in FLP motors.

Mounting

Standard motors are designed for foot mounting (B3). All foot mounted motors are with integral feet construction. These are also suitable for B6, B7, B8, V5 and V6 mounting without any change. Motors can be supplied in Flange mounting (B5). These are also suitable for V1 mounting.

Direction of Rotation

All motors are suitable for bi-directional rotation.

Balancing and Vibration

Rotors are dynamically balanced with a half key in the shaft extension. The balancing grade is G2.5 as per ISO:21940. Vibration grade is 'Normal grade' conforming to IS 12075. Other grades as per IS 12075 can be provided on request.

Motors are designed for noise level well below the limits specified in IS 12065.

Lifting Arrangement

All motors are provided with lifting hooks. When two or more hooks are provided, all hooks to be used simultaneously for lifting the motor.

Paint

All motors are given a special treatment of primer and paint to internal as well as external surface. All external surfaces are coated with epoxy polyamide base acid/alkali resistant paint of dark Admiralty Grey Shade (No. 632 as per IS: 5).

Name Plate

Stainless steel name plate is provided on each motor. Data such as gas group, temperature class and statutory approval references are provided with usual nameplate details.

FLAME PROOF MOTORS: Type Ex 'd'

Technical Information

Bearing and Terminal Box Details

| Frame Size | Bearing Nos. C3 Clearance | | Terminal Box Type | Terminals | | Cable Entries No & Size ** | Maximum Conductor Cross Sectional Area (mm ²) |

| 315S/M & L | 6319 | 6319 | MJ315 | 6 | M16 | 2 x M50 | 2RX3CX185 |

* 3 terminals up to and including 1.5 kW and 6 terminals for higher kW output.

** Cable entries other than those mentioned in the table can be offered subject to availability of statutory approval.

Note

- 1) L10 bearing life is 50,000 hours for directly coupled loads through flexible couplings only.
- 2) Standard terminal box location is TOP.
- 3) Sealed bearing (2Z) is filled with Lithium Soap based grease. Open bearings are filled with SKF LGMT3/ Unirex N3- ESSO grease.

Re-lubrication Interval

| Bearing | Pole | Re-lubrication | |
|---------|------|----------------|----------------|
| | | Quantity (g) | Interval (Hrs) |
| 6213 | 2 | 120 | 3200 |
| | 4 | | 9000 |
| | 6 | | 15000 |
| | 8 | | 21000 |
| 6215 | 2 | 150 | 2800 |
| | 4 | | 8200 |
| | 6 | | 10000 |
| | 8 | | 18000 |
| 6316 | 2 | 180 | 2000 |
| | 4 | | 7500 |
| | 6 | | 12500 |
| | 8 | | 16500 |
| 6317 | 4 | 220 | 7500 |
| | 6 | | 13000 |
| | 8 | | 17500 |
| | 2 | | 2000 |
| 6319 | 4 | | 5000 |
| | 6 | | 7500 |
| | 8 | | 10000 |

Cable Entries

Motor for mining application (i.e. coal mines and oil mines) is provided with compound filling sealing box. Cable entries suitable for flame proof glands (for application in hazardous area Gas Group IIA and IIB only) can be provided with flame proof glands. A cable sealing box is mandatory for all motors for use in coal mines and oil mines.

FLAME PROOF MOTORS: Type Ex 'd'

| 160M/L | 2(18.5kW) 6(11kW) | 840 | 440 | 540 | 220 |
| 180M/L | 2, 4, 6, 8 | 940 | 440 | 635 | 320 |
| 200L | 2, 4, 6, 8 | 940 | 540 | 690 | 408 |
| 225S/M | 2, 4, 6, 8 | 920 | 540 | 790 | 534 |
| 250M | 2, 4, 6, 8 | 1100 | 660 | 820 | 696 |
| 280S/M | 2, 4, 6, 8 | 1220 | 660 | 890 | 860 |
| 315S/M | 2, 4, 6, 8 | 1300 | 870 | 1000 | 1120 |
| 315L | 2, 4, 6, 8 | 1500 | 870 | 1003 | 1625 |

Special Features

- Sturdy housing that prevents an internal explosion from spreading to the external environment and also resists the explosion pressure.
- Robust bearing shields and caps bolted to the frame in a manner where the gaps remain unaffected in the event of an internal explosion.
- Screen on air intake with a mesh size not exceeding 8mm.
- External two earth terminals on motor feet.
- Protective earth conductor terminal in the terminal box.
- Ex 'd' mark on the motors.
- Special insulation treatment and painting treatment to resist highly corrosive atmosphere.
- All vertical mounted motors will be provided with 3 lifting lugs.

Special Maintenance Care During Operation

Each motor must be provided with protective circuit breaker or an equally effective device. In order to maintain safety protection, the following care must be taken on site during operation:

- The joint faces must not be re-machined nor finished or coated with varnish or paint. The surfaces must be kept metallically clean. A thin film of grease must be applied as protection against rust. The use of gaskets at point where there were originally none, is not permitted.
- Defective mounting screws and bolts must be replaced promptly by new ones of a material with same tensile-strength as the original ones.
- Care should be taken to see that all screws, bolts, nuts etc, used for fixing the parts of flame proof enclosure are provided with spring washer wherever originally supplied, to prevent them from getting loose due to shocks and vibration during operation.
- Enough ventilating space must be provided for efficient cooling of the motor. Refer GA drawing given in the catalogue.

| TB Position: Top | TB Position: RHS: 112 Frame and above LHS: 160 Frame and above |
| Cast Iron Construction: For all frames | |
| Shaft Material: EN8 | EN24, EN57 |
| Insulation: Class F | Insulation: Class H |
| IC411: Totally Enclosed Fan Cooled | |
| Sealed Bearing: upto 200 Frame Online Greasing Arrangement: 225 Frame and above | Online Greasing Arrangement: 180 to 200 Frame |
| Paint Shade: AAP 632 | AAP Epoxy based RAL grade or Epoxy based IS:5 grade |
| Fan Cover: Mild Steel | |
| Gelcoat on Winding: For all frames | |
| Space Heater: 315 Frame | Space Heater: 90 Frame and above |
| Motor suitable for grid supply | Motors with Inverter Duty Suitability, offered with: 1. Combined testing for temperature class certification; test facility available 2. Motor fitted with PTC thermistor |
| Packing: Corrugated Boxes: Upto 100 Frame Wooden Packing Boxes: 112 Frame and above | Seaworthy/Export Packing Case |
| For standard bearings, kindly refer to the bearing chart | Insulated Bearing: 132 Frame and above (hybrid bearing till 225 Frame) Cylindrical Roller Bearing on DE Side: 160 Frame and above |

Our other optional features

- Non standard shaft material, diameter and extension
- Double compression glands
- Auxiliary Terminal Box: 200 Frame and above
- Thermistor: 90 Frame and above
- Canopy, water flinger, non standard paint and paint shade
- High temperature grease
- Reduced and special grades of vibration as per IS 12075 can be provided on request

Note

- 1) Kindly confirm application wise requirement of cable sealing box and auxiliary terminal box with our nearest sales office.
- 2) For any other non standard feature, kindly contact our nearest sales office.
- 3) For enquiries of ATEX / IECEx certified motors, kindly contact our nearest sales office.

FLAME PROOF MOTORS: Type Ex 'd'

C. Statutory Requirement for Flame Proof Induction Motors Fed with VFD Supply

Combined Testing of Flame Proof Motor and Converter

Bharat Bijlee motors have been tested and approved by statutory authorities for given temperature class with sinusoidal supply. Since VFD supply contains more harmonics, temperature rise of motor increases on VFD supply. This leads to increase in surface temperature. Also, with the VFD, motor speed is varied. When motor speed is reduced, it leads to poor cooling and higher temperature rise. So the new temperature class needs to be verified by statutory authority. 16724 (Explosive Atmospheres - electrical installations design, selection and erection) or IEC 60079-14 (Explosive Atmospheres - Part 14: electrical installations design, selection and erection) is the selection guide for the user. The statutory testing authorities insist that the motors intended for use in hazardous area, which are to be supplied with varying voltage and frequency by converter, shall be tested, certified, and approved in association with the converter to determine the temperature class / maximum surface temperature.

Note

- 1) Additional factors may also need to be taken into account, which include provision by the user of additional output filters or reactors and the length of cable between converter and motor. Both these affect motor input voltage and cause additional motor heating.
- 2) High frequency switching in converters can lead to rapid rise time voltage stress in windings and cable circuits and therefore is a further potential source of ignition. It is necessary to consider the effects of this stress according to the type of protection. It will be necessary to add an additional output filter after the converter.
- 3) Insulation scheme of flame proof IE3 motor is enhanced to suit high rate of rise of voltage (dV/dt). However, based on speed range, torque-speed profile and other application requirements, the accessories and other features need to be carefully selected for safe and reliable operation of motors. These accessories and features can be offered on specific request.
- 4) Bearing currents require special consideration. Possible solutions include the use of insulated bearings, either alone, or in accordance with a filter that reduces common mode voltages and / or dV/dt .

Cable Length between Motor and Converter

Whenever flame proof motor is fed through converter supply, converter is placed in safe area and motor is working in hazardous area. Hence the cable length is generally high, i.e. 500 to 800 meters long. For effective and trouble free operation of motor, use of filters (preferably sine wave filter) at converter output terminals is a must, when using such high cable length. The customer and / or his system

integrator has to ensure that the peak phase to phase voltage appearing at motor terminals is $\leq 1.56\text{kV}$ and rise time should be > 0.5 micro second. Electrically balanced shielded cable (with 3 earth conductors) should always be used when motors are fed with VFD supply.

Use of Thermal Protective Devices

Use of thermistors is recommended to protect the motor from abnormal temperature rise of stator winding.

FLAME PROOF MOTORS: Type Ex 'd'

D: Performance Data: Efficiency values complying to IE3 Efficiency Class of IS:12615

Voltage: 415V +/- 10%
 Frequency: 50Hz +/- 5%
 Combined Variation: +/- 10%

Ambient: 45°C
 Duty: S1 (Continuous)
3000 rpm (2 Pole)

Insulation Class: Class F
 Temperature Rise: Class B
 Protection: IP55

All Dimensions are in mm unless otherwise specified.

** Minimum distance for efficient cooling of motor to be maintained by user.
Note: For motor in frame 180M/L & 200L with B3/B5 Mounting, kindly refer to our nearest sales office. For non standard motors, dimensions may change. Please contact our nearest sales office for details.

- Separate space, heater T. Box will be provided as a std. feature in case of 315 S/M/L frames.
- Double shaft extension can be provided with shaft dimension identical to D.E. shaft.
- 8 Nos. Fixing Holes from 225 S/M frame onwards
- Key / key way fit: h9 / N9.

INCREASED SAFETY Ex ec MOTORS

INCREASED SAFETY: Type Ex ec-IS/IEC 60079-7 (Former Ex nA)

A. Technical Information

Increased Safety Ex ec motors provide protection against auto ignition of surrounding gases, which may be released under abnormal operating conditions.

A.1 Reference Standards

| | |
|----------------|--|
| IS/IEC 60079 | Electrical apparatus for explosive gas atmosphere - Part 0 General Requirements |
| IS/IEC 60079-7 | Electrical apparatus for explosive gas atmosphere - Part 7 Equipment Protection by increased safety "e" |

A.2 Limiting Temperature

These motors are designed such that the limiting temperatures of all parts in continuous operation does not exceed 200°C i.e. Temperature Class T3, as per IS/IEC 60079-7.

A.3 Electrical Features

Standard Operating Conditions

- Voltage: 415V ± 10%
- Frequency: 50 Hz ± 5%
- Combined Variation: ± 10% (absolute sum with maximum frequency variation 5%)
- Ambient: 50°C
- Altitude: upto 1000m above mean sea level

Re-Rating factors applicable under different conditions of Supply Voltage, Frequency, Ambient and Altitude

| Voltage Variation % | Frequency Variation % | Combined Voltage & Frequency % | Permissible Output as % of Rated Value |
|---------------------|-----------------------|--------------------------------|--|
| ± 10 | ± 5 | ± 10 | 100 |

Method of Starting

| kW Rating | Method of Starting | No. of Leads |
|-------------------------|---------------------|------------------------------|
| Upto & including 1.5 kW | DOL | 3 (Internal Star Connection) |
| Above 1.5 kW | DOL or Star / Delta | 6 |

Starting Current Measurement of Bharat Bijlee Motors

Induction motor starting current is generally 6 to 7 times the full load current of the motor. This is a characteristic feature of the motor and though undesirable, it is inevitable in the design of the motor.

Measurement of this starting current at rated voltage becomes difficult since it demands higher capacity of the supply system as well as use of appropriate CTs in the circuit of meters. Generally, a fraction of rated starting current is passed in the motor due to capacity constraints. This current is extrapolated to rated voltage.

INCREASED SAFETY MOTORS: Type Ex ec

Following guidelines are followed to conduct Locked Rotor Test

| kW Range | Measurement at % of Voltage to Rated Voltage |
|------------------|--|
| 0.12 kW to 90 kW | 70 % |
| 90 kW to 200 kW | 60 % |
| 200 kW to 355 kW | 35 % |

Earthing Terminals

Two earthing terminals are provided on the body and one earthing terminal is provided in the terminal box.

A.4 Mechanical Features

Enclosure and Cooling

Upto 71 Frame: Aluminium Construction; 80 Frame and above: Cast Iron Construction.

All motors are Totally Enclosed Fan Cooled (TEFC). The cooling is affected by self-driven, bi-directional cast iron or fabricated centrifugal fan protected by fan cover. The type of cooling is IC 411 as per IS 6362/IEC 60034-6. Minimum cooling distance as indicated

in GA drawing has to be provided for effective cooling of the motor.

Degree of Protection

All Increased Safety motors have degree of protection IP55 as per IS/IEC 60034-5 as a standard feature. In addition, all flange mounted motors (B5 and B14) have oil tight shaft (OTS) protection. Motors with V1, V5 and V18 mounting are provided with a canopy fitted on the top of the fan cover.

Paint

All internal and external surfaces are coated with epoxy polyimide base acid/alkali resistant paint of Dark Admiralty Grey, Shade No. 632 (as per IS: 5).

Name Plate

Stainless steel name plate is provided in each motor. Special data such as efficiency, temperature class and statutory approval reference are also provided on the nameplate along with the usual name plate details.

Bearing and Terminal Box Details

| 355L/K (4, 6 Pole) | 6322 | 6322 | 2 x M75 x 1.5P | | 400 | | | | |

* 3 terminals up to and including 1.5 kW and 6 terminals for higher kW output.

Note: 1) L10 bearing life is 50,000 hours for directly coupled loads through flexible couplings only.
 2) In 315L frame for star delta connection, higher size T box of 355 frame will be provided.

INCREASED SAFETY MOTORS: Type Ex ec

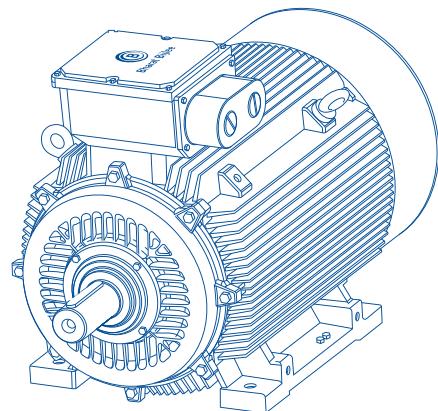

B. General Specifications: Standard and Optional Features

Range

- **Series:** Increased Safety Motors, Type Ex ec: Efficiency Values

Complying to IE2 & IE3 class of IS 12615/IEC 60034-30-1

- **kW:** 0.12 to 355
- **Frame:** 63 to 355
- **Polarity:** 2, 4, 6, 8

| Standard Features | Optional Features |
|---|--|
| Voltage: 415V | Upto 690V |
| Frequency: 50 Hz | |
| IP55 | IP56, IP65, IP66 |
| B3 Mounting | B5, B35, V1 & B14 (upto 132 Frame) |
| Ambient: 50°C | Upto 60°C |
| Duty: S1 | S3/S4 on request |
| TB Position: Top | RHS / LHS |
| Aluminium Construction: 63, 71 Frame Cast Iron Construction: 80 Frame and above | |
| Shaft Material: EN8 | EN24, EN57 |
| Insulation: Class F | Insulation: Class H |
| IC411: Totally Enclosed Fan Cooled | |
| Sealed Bearing: upto 200 Frame Online Greasing Arrangement: 225 Frame and above | Online Greasing Arrangement: 180 to 200 Frame |
| Paint Shade: AAP 632 | AAP Epoxy based RAL grade or Epoxy based IS:5 grade |
| Fan Cover: Mild Steel | |
| Gelcoat on Winding: For all frames | |
| Motor suitable for grid supply | Inverter Duty Suitability: Combined testing facility available for temperature class certification |
| Packing: Thermocol / Corrugated Boxes: Upto 132 Frame Wooden Packing Boxes: 160 Frame and above | Seaworthy/Export Packing Case |
| For standard bearings, kindly refer to the bearing chart | Insulated Bearing: 132 Frame and above (hybrid bearing till 225 Frame) Cylindrical Roller Bearing on DE Side: 160 Frame and above |

Our other optional features

- Non standard shaft material, diameter and extension
- Double compression flame proof glands
- Higher size T Box, auxiliary T Box from 200 Frame onwards as per requirement and feasibility
- Space Heater: 90 Frame and above
- Thermistor: 90 Frame and above
- Canopy, water flinger, non standard paint and paint shade
- High temperature grease
- Reduced and special grades of vibration as per IS 12075 can be provided on request

Note

- 1) Kindly confirm application wise requirement of auxiliary terminal box with our nearest sales office.
- 2) For Increased Safety Ex ec motors to be operated on VFD supply, combined testing of motor and converter is mandatory. Refer page 27 for further details.
- 3) For any other non standard feature, kindly contact our nearest sales office.

INCREASED SAFETY MOTORS: Type Ex ec

C. Statutory Requirement for Increased Safety Induction Motors Fed with VFD Supply

Combined testing of Increased Safety motor and converter

Bharat Bijlee motors have been tested and approved by statutory authorities for given temperature class with sinusoidal supply. Since VFD supply contains more harmonics, temperature of motor increases on VFD supply. This leads to increase in surface temperature. Also, with the VFD, motor speed is varied. When motor speed is reduced, it leads to poor cooling and higher temperature rise. So the new temperature class needs to be verified by statutory authority. IS 16724 (Explosive Atmospheres - Electrical installations design, selection and erection) or IEC 60079-14 (Explosive Atmospheres - Part 14: Electrical installations design, selection and erection) is the selection and installation guide for the user. The statutory testing authorities insist that the motors intended for use in hazardous area, which are to be supplied with varying voltage and frequency by converter, shall be tested, certified and approved in association with the converter to determine the temperature class / maximum surface temperature.

Note

1. Additional factors may also need to be taken into account, which include provision by the user of additional output filters or reactors and the length of cable between converter and motor. Both these affect motor input voltage and cause additional motor heating.
2. High frequency switching in converters can lead to rapid rise time voltage stress in windings and cable circuits, and is therefore a further potential source of ignition. It is necessary to consider the effects of this stress according to the type of protection. It will be necessary to add an additional output filter after the converter.
3. Bearing currents require special consideration. Possible solutions include the use of insulated bearings, either alone, or in accordance with a filter that reduces common mode voltages and/or dV/dt .

Cable length between motor and converter

Whenever Increased Safety Ex ec motor is fed through converter supply, normally the converter is placed in a safe area and the motor works in hazardous area. Hence, the cable length between the converter and the motor is generally high, i.e. 500 to 800 meters long. For effective and trouble free operation of motor, use of filters (preferably sine wave filter) at converter output terminals is a must, when using such high cable length. The customer and / or his system integrator has to ensure that the Peak Phase to Phase voltage appearing at motor terminals is $\leq 1.56kV$ for rated supply 415V and rise time is > 0.5 micro second. Electrically balanced shielded cable (with 3 earth conductors) should always be used when motors are fed with VFD supply.

Use of thermal protective devices

Use of thermistors is recommended to monitor the temperature rise of stator winding of motor.

Notes: * This is a mandatory dimension for all standard motors
 ** Minimum distance for efficient cooling of motor to be maintained by user
 All dimensions are in mm unless otherwise specified.
 1. All tolerances on mandatory dimensions are as per IS: 1231.
 3. For non standard motors, dimensions may change. Please contact our nearest sales office for details.

Notes: 1. Eyebolt is not provided in motors of 63 to 90 Frame.
 2. Shaft extension at NDE identical to standard shaft extension at DE is not possible in 4, 6 & 8 pole in frames 315L & 355L.

INCREASED SAFETY MOTORS: Type Ex ec

Notes: * This is a mandatory dimension for all standard motors
 ** Minimum distance for efficient cooling of motor to be maintained by user
 1. All dimensions are in mm unless otherwise specified.
 2. Tolerances on mandatory dimensions are as per IS: 2223.
 3. For non standard motors, dimensions may change. Please contact our nearest sales office for details.

Notes: 1. Eyebolt is not provided in motors of 63 to 90 Frame.
 2. Shaft extension at NDE identical to standard shaft extension at DE is not possible in 4, 6 & 8 pole in frames 315L & 355L.
