Calculation of Required kVAr

Operating load kW and its average power factor (PF) as per the electricity bill OR we can easily calculate by a simple formula

$$\text{Avarage PF} = \text{kW} / \text{kVA}$$

Operating load kW = kVA Demand x Avarage PF

Average PF is considered as the initial PF and the final PF is assumed as a target PF. From this information required kVAr can be easily calculated with reference table.

Example: Calculate required kVAr to improve PF from 0.75 to 0.96 for 500 kW installation

$$\text{kVAr} = \text{kW} \times \text{multiplying factor from table} = 500 \times 0.590 = 295 \text{ kVAr}$$
